## Ropox/Scanflex CPD

### Designing Kitchens and Bathrooms for People with Disabilities

This CPD will:

Open minds to the potential needs and limitations of people with disabilities regarding movement, reach and space in the kitchen and bathroom.

Discuss room designs and features that can promote independence and dignity for individuals.

Look at the use of a more flexible environment to establish good working conditions for carers.

Refer to BS8300 and Part M and past Ropox/Scanflex projects.

One recent comment on the CPD:

*“I just wanted to contact you whilst today’s seminar is fresh in my mind, to thank you for your presentation. You mentioned that you’d appreciate a statement to convey our thoughts –*

*The CPD seminar was one of the most enjoyable we have had here at AXIS – the products are very interesting themselves and will no doubt improve the quality of space our clients demand. The seminar itself was presented in a dynamic and inclusive fashion, assisted by a wealth of knowledge on the subject, and goes far beyond the sales pitch which can usually be forefront with these type of visits! Inclusive Design and Health & Safety are areas of compulsory Continuing Professional Development which can be a struggle to fulfil – Ropox/Scanflex have boosted our confidence in these categories (as well as our CPD hours!) and enables us to provide a better service for our clients.*

*Leanora Simmonite |architect **AXIS** architecture”*

The presentation would suit designers involved in projects like Special Needs Schools, Hygiene (Changing Places) Rooms, Close Care Housing, University Halls of Residence, Hospitals, Hospices or any Adaptations for wheelchair users.
