

Multi Ergotable

To obtain optimum results of rehabilitation proper working postures for user and therapist/helper are decisive.

The Multi Ergotable is a height-adjustable working table with cut-outs in the front and back of the tabletop. The tabletop has cut off corners at the front. The two cut-outs provide support for body and forearms.

The working table is ideal for training situations where the user and therapist are sitting close together opposite to each other. Also wheelchair users may come close to the table, as it has no inconvenient braces. Because of the placing of the legs the table can also come close to the bed or couch.

In training situations when the user and therapist are sitting close together on the same side of the table the cut-out provides support and the cut off corners provide more space for the therapist sitting beside the user.

The standard version of the Multi Ergotable comprises two boomerangs, which may be easily fitted in the cut-outs of the tabletop. Included is also a moon-shaped boomerang to be used when a cut-out is required on one side of the table only.

Standard brake wheels ensure optimum stability and mobility of the table.

Length x width: 90 x 70 cm
Max. load: 100 kg

Models:	10-29010-9	Height 57-77 cm
	10-29020-9	Height 65-93 cm
	10-29030-9	Height 73-101 cm

All boomerangs fit into the front and back of the tabletop and may be easily replaced by loosening four thumb screws under the table.

If the table is equipped with two moon-shaped boomerangs it may be used as an ordinary working table with straight front and back.

Boomerang:	30521-000	Ø 22
	30522-000	Ø 26
	30523-000	Ø 30
	30524-000	Ø 34
	30525-000	Ø 40 (standard)
	30526-000	Ø 46
	30527-000	moon-shaped
